

## BT Skim coat-WR Vs Acrylic Wall Putty

Both are used for Leveling of Plaster wall from Hairline Cracks, Dents and plaster imperfections

BuildTech Skim Coat-WR is cement based Skim coat with high polymer additives for exterior and interior plaster walls.

While Acrylic wall putty is acrylic binder based with additive not cement based product.

### **Difference between both is as following**

<b>BT Skim Coat-WR</b>	<b>Acrylic wall Putty</b>
Interior and Exterior use	Interior use only
High Tensile Strength	Low Tensile Strength
High compressive Strength	Low compressive strength
High Flexural Strength	Low flexural strength
Dampness Area	Non-dampness area
Water resistant	No water resistant
No primer needed	POP, and primer needed
Low cost	High cost
Used for white emulsion only	Used for premium paints only
